PROJECT 08 · SURFING A GRAVITATIONAL WAVE

Storyboard: team plan vs. revised plan

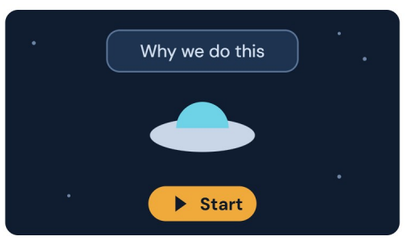

Both plans tell the same story until the ship reaches Earth. They differ in where, and for how long, the user gets to experiment with the wave.

THE ONE CHANGE

Experimenting moves out of the single, finite wave event and into its own scene, where the wave can be saved and replayed.

SAME IN BOTH PLANS Whiteboard steps 1 to 9

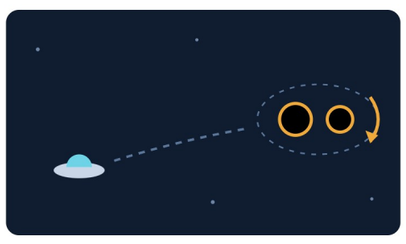

STEPS 1-2

Spawn in the ship

The user spawns in a ship and is told why we need to do this. Then the user starts the simulation.

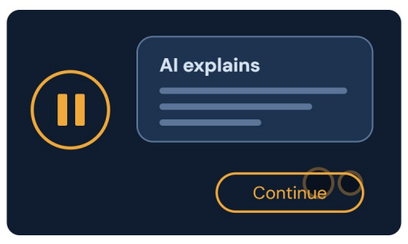

STEPS 3-4

Fly to the black holes

The ship travels to the black holes, which then start spinning.

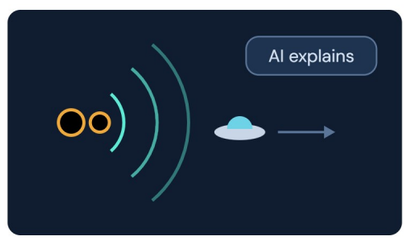

STEPS 5-6

Pause and explain

The video pauses while the AI explains. The user has the option to continue.

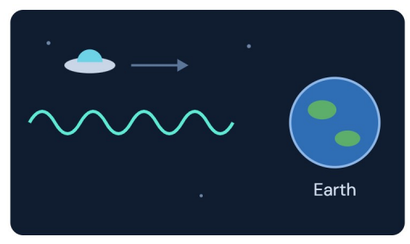

STEPS 7-8

Waves, ship rides along

The waves happen. The spaceship goes along with them while the AI explains.

STEP 9

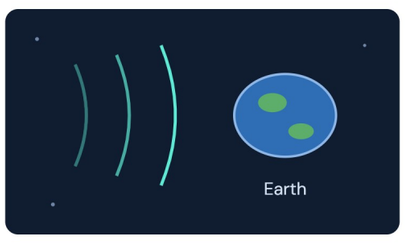

Moving toward Earth

The ship keeps moving with the waves towards Earth.

THE PLANS SPLIT AFTER STEP 9

TEAM'S ORIGINAL PLAN One continuous scene: the user watches Earth and adjusts the wave at the same moment. STEPS 10-14

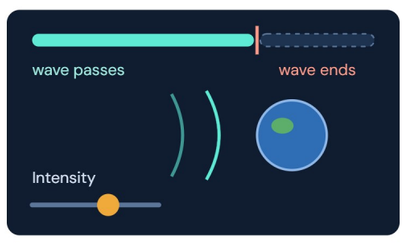

STEP 10

Wave reaches Earth

Show the changes the waves make to Earth.

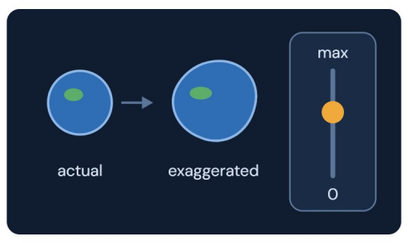

STEP 11 **PROBLEM**

Change intensity during the pass

The user manipulates intensity while the wave is passing Earth.

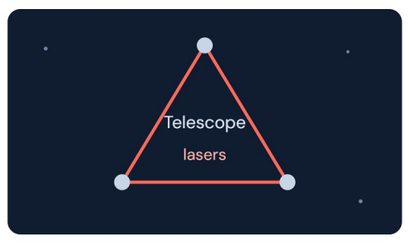

STEP 12

Actual to exaggerated

A panel with a 0 to max slider takes the deformation from actual to exaggerated.

STEPS 13-14

Telescope and lasers

The AI explains it in relation to the telescope, then shows the lasers and their relation to the project.

THE GAP

Where it breaks

The wave is one finite event. The user can only change intensity while it passes, and it is gone before they can compare what the changes did to Earth.

watching and adjusting — wave gone

REVISED PLAN The story stays. Experimenting moves into a separate Wave Lab scene. STEPS 10-14, REARRANGED

STORY SCENE

STEP 10 CHANGED

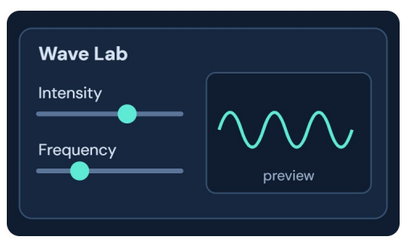

Demo wave reaches Earth

A fixed demo wave passes Earth at a preset exaggeration. The user only watches, then moves on to try it.

WAVE LAB · NEW SCENE

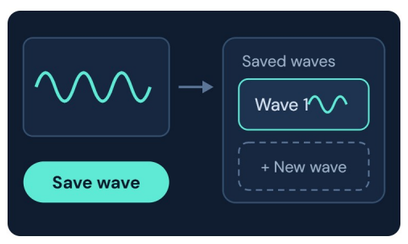

NEW SCENE

Wave Lab: shape the wave

No time limit. The user plays with intensity and other wave parameters. This replaces step 11.

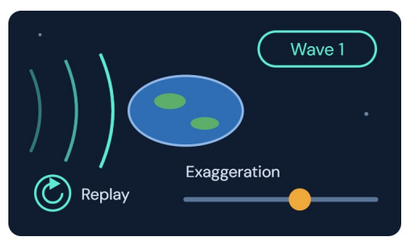

NEW

Save the wave

The user saves the wave they made, so it can be reused instead of being lost when it ends.

NEW

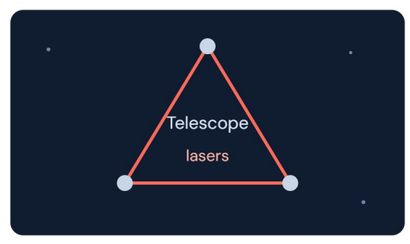

Replay it on Earth

The saved wave is applied to Earth. The user can replay it and use the exaggeration slider (step 12) as long as they like.

UNCHANGED CONTENT

STEPS 13-14 SAME

Telescope and lasers

The AI explains it in relation to the telescope, then shows the lasers and their relation to the project.

WHAT CHANGES Side by side

	Team's original plan	Revised plan
Where the user experiments	Inside the story, while the wave is passing Earth (step 11)	In a separate Wave Lab scene after the story
Time available	One pass. When the wave ends, the moment is gone	No limit. The saved wave can be replayed as often as needed
What the user controls	Intensity of the wave they are watching	Wave parameters, then saves the wave they made
Exaggeration slider (step 12)	0 to max panel, in the same scene as the passing wave	Same slider, placed next to a replayable wave so effects can be compared
Story scene at Earth	Watching and controlling at the same time	Watching only: a fixed demo wave at a preset exaggeration
Number of scenes	1 continuous scene	2 scenes: Story and Wave Lab

Based on the team's whiteboard (steps 1 to 14) and the Wave Lab proposal. Illustrations are schematic sketches, not final art.
